

Embedding in a Wiki

1. Once you have the code from your project (animoto or voki) you need to go into your wiki to embed it.
2. Go to the page you want to put the project on in your wiki.

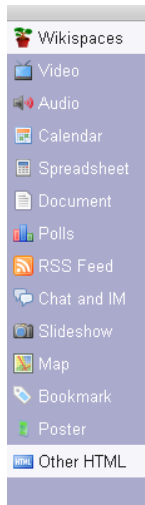

3. Click on the edit button for that page

4. Click on the **Widget** button in the editing toolbar.

5. Click on Other HTML in the left menu bar of the box that appears.

6. A text box appears where you can paste the HTML code that you copied (from animoto or voki). Press the Save button to save the code and embed it into the wiki.

Add your favorite media clips and applications to your wiki in three easy steps:

1. Go to your favorite video clip, podcast, or embedded application. Anything from **Google Calendar** to **Odeo** to **YouTube**!
2. Find the HTML code to paste into your site. This will be found in a text box labeled "Embed", "Embed HTML", "Add to My Site/Blog", "Link to this page", or similar.
3. Paste in the HTML below and click "Preview" to see how it will look. When you save your changes by clicking the "Save" button, your media clip or application will appear in your Wikispaces page.

Paste code here.

[Cancel](#)

7. The widget will appear as a blue box when in the editing mode.

8. Click on the blue box and you will get a small toolbar to adjust the size of the project and the page orientation.

9. When all done, press the Save button in the editing toolbar to save changes and see the project you embedded.
